CURIO® HERBICIDE
EPA Reg. No. 71368-82
EPA SLN No. OR-120001

This label is valid until December 31, 2017, or until otherwise amended, withdrawn, or canceled.

For Control of Creeping Buttercup in Cranberries

ACTIVE INGREDIENT (by weight):
Chlorimuron Ethyl
Ethyl 2-[[[[(4-chloro-6-methoxypyrimidin-2-yl)amino]carbonyl]amino]sulfonyl]benzoate……25.0%
OTHER INGREDIENTS:………………………………………………………………………..75.0%
TOTAL:………………………………………………………………………………………….100.0%

DIRECTIONS FOR USE
- It is a violation of federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on this label and the main EPA label.
- Read and understand the Oregon Cranberry Growers Association Special Conditions and Disclaimer for use before using Curio Herbicide on cranberries.

CROP and PURPOSE
For the post-emergence control / suppression of creeping buttercup and other incidental weeds in cranberries (bearing or nonbearing).

APPLICATION DIRECTIONS
Apply Curio Herbicide as a spot or small area treatment, or as a broadcast at the rate of 0.5 oz./ acre in 20 to 40 gallons of water/acre. Do not make more than two applications per year.

Warning: Do not over apply. Over-application will likely cause damage. It is recommended that spot or small area applications be made using a calibrated boom to prevent misapplication, rather than a backpack sprayer.

For optimum control of creeping buttercup, it is recommended that Curio be applied March to April. Other weeds controlled by Curio may germinate or emerge later in the season (May to July). Do not apply within 60 days of harvest.

Curio is a water dispersible granule that does not include a spray adjuvant. Applications must include one of the following adjuvants: a nonionic surfactant at the rate of 2 pints per 100 gallons of spray solution (0.25% v/v) or a crop oil concentrate at the rate of 2 pints per 100 gallons of spray solution (0.25%).

ENVIRONMENTAL CONDITIONS AND BIOLOGICAL ACTIVITY

This product rapidly inhibits the growth of susceptible weeds. Leaves of susceptible plants yellow 3 to 5 days after application. Curio provides complete control of susceptible weeds in 7 to 21 days. Suppressed plants may remain green but will be stunted and noncompetitive.

This product will provide best results when applied to young, actively growing weeds. Degree of control depends on: rate used; weed spectrum; weed size; growing conditions at and following treatment; soil moisture; precipitation; and spray adjuvants. Treating weeds under stress or large weeds may result in only partial control. Delay application until stress passes and weeds start to grow again. Severe stress (drought, hot or cold weather, low fertility, disease or insect damage) following application may also result in crop injury and/or poor weed control.

RESTRICTIONS/PRECAUTIONS
Do not enter or allow worker entry into treated areas during the restricted–entry interval (REI) of 12 hours.

Do not apply more than two applications per year. Wait at least 1 month between applications. Do not apply within 60 days of harvest.

Use ground equipment only, do not apply by air. Do not apply this product through any type of irrigation system.

Do not apply directly to water, or to areas where surface water is present. If using a boom sprayer, do not apply within 5 feet of any water moving off or through the cranberry field, unless the water in the ditches surrounding treated beds is held for 2 days after application.

Do not mix/load, or use within 50 feet of all wells included abandoned wells, drainage wells, and sink holes.

Do not apply this product if rain is expected within 1 hour or weed control may decrease.

Do not mix with organophosphate insecticides, or apply within 14 days before or after an application of an organophosphate insecticide as severe crop injury may occur.

The NPDES Pesticide General Permit (PGP) is not required for waters that are irrigation return flow. For additional information regarding the Oregon PGP, contact Oregon Department of Environmental Quality, http://www.deq.state.or.us/wq/wqpermit/pesticides.htm

Oregon Cranberry Growers Association Special Conditions and Disclaimer for Use of Curio® Herbicide on Cranberries.

The Oregon Cranberry Growers Association (OCGA) intends that this Section 24(c) label be distributed only by the OCGA and distributed only to OCGA members who agree in writing to the terms and conditions required by the OCGA and Nufarm including a waiver and release from all liability and indemnification by the user and/or grower of the OCGA, Nufarm and others for failure to perform and crop damage from the use of Curio Herbicide on cranberries. If such terms and conditions are unacceptable, return Curio at once unopened.

This product when used on cranberries may lead to crop injury, loss or damage. The OCGA recommends that the user and/or grower test this product in order to determine its suitability for such intended use. The OCGA and Nufarm make this product available to the user and/or grower solely to the extent the benefit and utility, in the sole opinion of the user and/or grower, outweigh the extent of potential injury associated with the use of this product. The decision to use or not to use Curio must be made by each individual Curio user and/or grower on the basis of possible crop injury from Curio, the severity of weed infestation, the cost of alternative (pest) controls, and other factors. The OCGA intends that because of the risk of failure to perform or crop damage that all such use is at the user's and/or grower's risk, to the extent consistent with applicable law.

This Special Conditions and Disclaimer statement is required by the OCGA and Nufarm, and is not required or enforced by the USEPA or the Oregon Department of Agriculture.
